

Database Design

Practice: Generating a Database Script

Instructions

Create a complete SQL database creation script and test it.

The script should include:

- **Three tables** that have at least **one foreign relationship key**.
- **CREATE TABLE**, **DROP TABLE**, and **INSERT** statements.
- Being wrapped in a transaction.

Test Case:

- INPUT: Run your script using MySQL Workbench.
- EXPECTED OUTPUT: Your script should run without errors, and you should see the tables created in the database with the specified data.

Setup

For this activity, you will create your own repository to store your code:

1. Create a new repository.
2. Name it: practice-databaseScript-[Your First Name]-[Your Last Initial]
3. Make sure the repository is public.
4. Clone the repository to your local machine.
5. Start working on the code.

Submission

Submit the url for your GitHub repo in the field below.
